

# How will AI change the future?

## Consultant in Advanced Analytics, focus Consulting (w/m/d)

### Office Munich

Siemens Management Consulting (SMC) is the global management consultancy for one of the world's most innovative engineering and technology companies. We drive the digital transformation forward and provide Siemens and numerous other clients in the technology sector with consulting services, ranging from strategy through to implementation. Our mission is to transform our clients' future and to develop the talent of today into the business leaders and experts of tomorrow.

As a Consultant in Advanced Analytics you are part of the Digital Consulting unit and work on Industrial Digitalization. Together with your team you will develop and implement projects in data analytics. You will analyze large amounts of datasets and apply data mining in order to identify areas for improvement. You will translate your data-driven insights into concrete business recommendations for both the Siemens Group and the external market. With us, you will have the opportunity to specialize in your field and in related disciplines in large and exciting industries. Grow with us and use your chance to follow successful SMC alumni into leadership positions.

### What you'll do

- Work with your project team in close collaboration with clients and internal colleagues from Management Consulting, Operations Consulting and the UX team
- Inspire our customers with innovative solutions based on their needs and act as a key figure in the piloting and implementation of these solutions
- Enable data-driven decision making by exploring and visualizing data
- Build ad-hoc analyses and work with large volumes of structured and unstructured data
- Communicate the results from your data analysis by translating them into strategic insights and storylines
- Ensure smooth collaboration and drive client decisions

### What you'll need

- Up to three years of professional experience in data science, software engineering, big data or a similar field
- Initial experience with cloud technologies like AWS and visualization tools such as Tableau and QlikSense is an advantage
- Familiarity with data-driven, impactful business recommendations that match with client needs
- Outstanding degree from a university (master's/diploma/PhD) in business administration, management & technology, computer science, statistics, mathematics, physics, data science/engineering, machine learning or a related field
- Relevant international work experience (studies abroad, internships)
- Excellent analytical and problem solving skills combined with ability to present in a clear manner
- Highly developed communication skills in English, German is a plus
- Team player with strong interpersonal skills and willingness to travel (approx. 80 percent)
